

Your world, Here and Now...

Bringing meaning into your maps...

Let the LASER redesign your world...

Enabling your growth through Digital Transformation

Our Services:

- **Photogrammetry**

We provide high quality updated mapping solutions for diverse applications such as: natural disasters, construction, surveying etc in a timely manner and at cost effective rates. Our services include: Aerial Triangulation, Stereo Complication and DEM and DTM.

- **LiDAR (Light Detection and Ranging)**

We generate accurate high volumes of data and intensity images with the aid of IMU and GPS data to model the earth's surface. Our services include Powerline Data Processing, 3D City Modelling and Flood Mapping. We solve all LiDAR processing needs.

- **Mobile Mapping**

We operate the highest grade of mobile LiDAR scanners to conduct topographical survey. Our team also captures Mobile LiDAR data of 200 km/day using our own survey equipment with relative accuracy of 5 cm. We convert survey data to create topographical maps, contours and cross-sections which help preparing detailed project reports (DPR).

- **Smart Cities**

We support urban renewal projects with specialised City Planning, Technology Solutions, Utility Management, Mobility & Location Management, In-transit Safety Management, Integrated Platform Solutions and Location Content - Navigation.

- **Data Conversation**

Our team has extensive experience with land-based facility database conversion and has assisted utility companies, Municipalities, consulting firms, town planners, architects and engineers.

Typical projects are Survey & Data collection, GIS Map Data creation and Digitization, Utility mapping, etc.

- **3D Laser Scanning**

We deliver 3D models for any type of structure or buildings. These are accurate to the nearest millimetre and provide superlative level of realism.

Our services include 3D “as-built” update, Reverse Engineering, Wireframe Models, Rapid Surface Model, Solid Model, Surface texturing/Photo draping, Animation / Walk through and Rapid surface models.

- **Building Info Modelling (BIM)**

We offer Building Visualization, Logistics planning, Constructability Analysis, Clash Detection and much more. We take a multi-disciplinary approach, aiming to offer innovative solutions to current infrastructural development practices around the globe.

Our services include Modelling, Coordination, Integration, Documentation and Implementation.

- **Location Content – Navigation**

Our Services include:

Base Map Creation: Develop end-to-end Navigable Map Creation and realignment of Street networks & Geographical Attributes based on satellite & Aerial Imagery.

Field Data Collection: Used for road networks, Point of Interest (POI), Point address, Transit data, etc.

Here and Now. A Promise to build technology that expands your awareness of things you care about.

Our Vision of “**Expanding your Here and Now**” drives and binds our key businesses.
